## Curricular and Administrative Innovations

Graduate Enrollment Management Plan, College of Arts and Letters 2015–Present

- Created a comprehensive plan to increase graduate enrollments in the College’s twelve degree programs.
- Built and deployed a web-based toolkit to guide admissions decisions, including historical data on applications, admissions and yield; a binomial calculator to estimate admissions rates; and a system dynamics model to estimate long-term head counts and FTEs.
- Conducted two yield management workshops for the College’s graduate program directors to develop rolling admissions; wait-listing; provisional admissions; and pre-admission recruitment.
- Developed non-perishable web recruitment media that do not require regular revisions in response to faculty or curricular changes.

University Strategic Plan, [Academic & Research Strengths Subcommittee](#) 2013–14

- Co-chaired the Committee on Academic and Research Strengths charged with developing the university’s research, teaching, practicum, and job creation priorities for the 2014-2019 period.
- Analyzed emerging cost drivers, revenue constraints, and disruptive technologies that will require the University to prioritize investments of resources.
- Articulated five principles to guide the committee’s work: planning not only for five years but also for the next two decades; nurturing flexible and adaptive practices; conserving existing strengths; selecting, retaining and promoting our best people; and innovation through multiple pathways.
- Developed seventeen strategic recommendations, each with an operational plan that identified executive responsibility; timeline for implementation; necessary resources; and measures of success.

Intensive Course in Complex Systems Science and Agent-Based Social Simulation 2011–12

- Collaborated with researchers from Syddansk Universitet (the University of Southern Denmark) and the University of Sydney Business School to create an interdisciplinary course in complex systems science.
- Taught a six-day course with 48 contact hours to a class of 18 doctoral students in the Department of Entrepreneurship and Relationship Management at the University of Southern Denmark.
- Topics included nonlinear dynamics; chaos theory; Boolean logic; the basics of object-oriented programming; genetic algorithms; and an introduction to the NetLogo modeling environment.
- Students developed and presented original agent-based models that explored nonlinear dynamics in business and economics, including increasing returns; innovation networks; supply chains and logistics optimization; and others.

Master’s Program in Political Science 2007–12

- Developed a proposal to establish a new master’s degree in political science at ODU for an underserved metropolitan area of 1.7 million people.
- Assessed the market demand for the degree including evaluating job market data; corresponding with local civic leaders; corresponding with the region’s military commands and NATO’s Allied Command Transformation; and surveying the area’s undergraduate students.
- Created a comprehensive curriculum for a political science degree with an emphasis on the American politics subfield.
- Guided the proposal through the University’s approval process, including the Department, College and University curriculum committees, the Faculty Senate, the Provost, and the Board of Visitors.
- Work with staff from the State Council of Higher Education for Virginia (SCHEV) to revise the proposal to align the proposal with the Commonwealth’s strategic vision for higher education.

Visuals and Imagery of Globalization Online Repository (VIGOR) 2010–Present  
<http://www.vigorproject.net/spring2012/>

- Developed an online toolkit to allow students to find and share photographs, film, television, graphic arts, advertisements, fashion, and other images of “globalization” from outside the classroom.

- Eventually, the site’s visualization software will promote active learning about globalization by allowing students to map conceptual and thematic interrelationships among images in the database.
- By facilitating nonlinear navigation, the site will encourage active learning by enabling students to direct their own learning about the social, economic, technological, cultural and normative dimensions of globalization.
- Work with teaching technology specialists to integrate methods from concept mapping, network theory, and collaborative tagging with web-based content management systems.
- Received a modest seed grant from ODU’s Center for Learning and Teaching.

Modeling & Simulation in International Studies

2007–Present

- Developed and taught a graduate seminar on agent-based modeling in international studies.
- Collaborated with colleagues to develop a new field concentration on modeling and simulation that combines seminars in advanced statistics; game theory; computer simulation; and data visualization.
- Serve as a faculty mentor and judge for the Virginia Modeling Analysis & Simulation Center’s (VMASC) annual student capstone conference, at which M&S students from all disciplines present their simulation original research.
